[The Eddleman Quantum Institute \(EQI\)](#) has awarded six graduate research fellowships (GRF) for 2022-2023 academic year.

These fellowships exist thanks to the generous support from philanthropist [Roy Eddleman](#). The EQI stimulates the discovery of new quantum science phenomena through interdisciplinary collaborations in a broad range of scientific endeavors, and motivates future generations to study quantum science through education and outreach activities.

The 2022- 2023 EQI GRF recipients are:

- Hana Schiff (Judith Romhányi's group)
- Mara Mishner (Ilya Krivorotov's group)
- Ryan Pederson (Kieron Burke/Steven White groups)
- Ian Sequeira (Javier Sanchez-Yamagishi's group)
- Steven Allison (Maxx Arguilla's group)
- Timothy McSorley (Luis Jauregui's group)

The GRFs are awarded annually with nominations being solicited in January.
