

CHEM 11:

New Chemistry Student Seminar

All new transfer and freshman students are encouraged to sign up for Chem 11. Chem 11 consists of weekly meetings led by the Chemistry Department's vice-chair for undergraduate curriculum to provide information on available courses and specializations in the Chemistry major, future career opportunities in chemistry-related fields, research opportunities in the Department of Chemistry, and relevant programs and campus resources offered to the students. There will be a few sections of this class offered in the fall quarter at varying times to accommodate student's schedules.

Chem 11 will also help you to:

- Better understand the value of the Chemistry major and the career options it opens to students.
- Effectively utilize the Chemistry Department, School of Physical Sciences, and campus resources.
- Better connect with instructors, TAs, peers, and other members of the Chemistry Department.
- Better understand the role of chemistry in solving societal problems.
- Learn about opportunities and how to engage in research activities in the Chemistry Department

If you have any questions about this class, please contact:

Prof. Stephen Mang
Vice-Chair for Undergraduate Curriculum
Department of Chemistry
