Come to Visitor Night at the UCI Observatory!

Saturday
Nov 9
7 - 9 pm

Come to the UCI Observatory and see the Moon, Venus, Neptune, Uranus, globular cluster M15, the Ring Nebula M57 and other fabulous celestial objects with our telescopes. Learn how to use a night sky map to locate your favorite constellations. Listen to a lecture entitled “Galaxies and Their Environments: Exploring the Nature verses Nurture Debate from a Cosmic Perspective” by Dr. Michael Cooper. Visitors should park in the East Campus Parking Structure at California Avenue & Adobe Circle Road South for $2/hr or $10 maximum and take a shuttle to the Observatory’s gravel road at the corner of California Avenue & Gabrielino Drive. The event will be canceled only if it rains, but if so, a notice would be posted on our website by 3 pm that day. To obtain more information, campus maps, driving directions, request email notices of future Observatory events, or to join Friends of the Observatory, please see our web site: http://ps.uci.edu/~observat.

The UCI Observatory is operated by the University of California, Irvine, Department of Physics & Astronomy, and Visitor Nights are funded by the School of Physical Sciences, Friends of the Observatory and donations from our generous visitors.
